ONE MORE COPPER MINE AT MASON

Big and Rich as Any in District.

MINE ALREADY

Whole District Is Busier and More Prosperous Than Ever Before.

The character of the results being achieved by Sait Lake capital in the New Yerington Copper company of Mason. Nev., is well illustrated by a letter received on Wednesday from a well known man of Mason. In part this letter says:

"As the development in the New Yerfington progresses, it is showing to be a mine of no small magnitude. On the 250-foot level the usual amount of ore of very high grade is being broken down, and there is an abundance also of medium grade. 6 per cent copper and better. On the 400-foot level is one of the sines slowings or high-grade ever seen in a mine, and fliere is plenty of 6 per cent ore and better all through the mine. I understand that shipments are to begin Monday, but anyway in a very few days. The force of nihers is to be increased the force of nihers is to be increased and regular production will be the order of the day.

"On the 400 it simply looks as if this was a big mine in itself, and in my opinion it is big and good as any here. The 400 will be adding its formage in a very few days. Superintendent Marsal, I consider, is one of the best miners in the district, and he certainly is one of the most conservative men that I have ever seen in charge of a property. He has studied this ground and knows more about it than any in the whole districtiad others this one if two whole districtiad others this one if would be herealded all over the country, and if I had it I would consider it as hig as any of them.

The letter states that the Newada abaughas company is pushing its development with rapidity, the resources opened on the 700-foot level, the deepest work on the Ludwig, being very lick even for this high-grade mine. In the Copper Casting section the company is positing its development with rapidity, the resources opened on the 700-foot level, the deepest work on the Ludwig, being very lick even for this high-grade mine. In the Copper Casting section the company is positing its development of the supplements are being increased and these are to be still further talsed.

Throughout the whole district there is an about the company of the company is positing the development with rapidity, the resources opening a very large body of 8 per cent. The lower very several new strong spots the research and these a "As the development in the New Yerington progresses, it is showing to be a but mine of no small magnitude. On the

Throughout the whole district there is activity and ores developing along a scale never before equaled there.

STATEMENT OF THE UNION CHIEF DEAL

Regarding the financing of Union Chief, R. H. Stevens says:

"We have had engineers looking over Union Chief for some time and after careful examinations, we decided to finance the property to an extent to insure its complete development. At the mine there are now about 1000 tons of ore blocked out; the high-grade will run about 71 per cent lead and 30 ounces silver, and the lower grade 20 per cent lead, 5 ounces silver and 25 per cent from There are apparently hundreds of tons of good shipping ore on the upper level which will not a good profit to the company.

tons of good shipping o'e on the upper level which will not a good profit to the commany.

"The lower tunned is apparently less than 100 feet from the ore and will out it at a depth of about 1200 feet. This should afford stoping from that depth to the upper tunned level. This tunnel will now be driven in at the rate of from six feet to eight feet a day. The ore showing in the face is now exceptionally good and shows that the company is following the right course.

"It is true that I have purchased the remaining treasury stock, though some erroneous impressions have been circulated and published as to the conditions of the deal and price naid. We had honed to get the 200,000 shares at the price reported, but we still feel that we have a bargain, though we could not secure the price at first expected.

"I am not at liberty at this time to state for whom this stock is being purchased or the price paid, but it now seems certain that the future of the mine is assured."

PLUTUS MINE WILL LIKELY BE OPENED

LIKELY BE OPENED

Liavid Evans, general manager and chief owner of the Plutus Mining company, came to Salt Lake from his California toone Wednesday morning, this being his first visit in about two years. While his visit to Utah at this time was drammounced, his local friends have expected him for several days, for they agree that the time is near ripe for the Plutus company resuming operations.

To The Tribune Mr. Evans stated that he intended to go into the Plutus company's affairs without delay; he will meet with the shareholders and map out a future course that will be accentable to everyone, the feels sure. He appreciates the strategic localism of this property at Tinite and is anxious to place it on the active list himself. While Mr. Evans secured the big end of the Plutus in the trade several years ago with Jesse Knight, giving up the Ibex for the Knight still retaining his office as president.

Mr. Evans is enthusiastic over the

Mr. Knight still retaining his office as president.

Mr. Evans is enthusiastic over the growth of Satt Lake in the past few years, the changes along Main street impressing him especially. The Kearns, the Walker and the Hotel Utah building have been orected since he was last here

PRINCE ROAD READY BY JUNE THE FIRST

According to the engineer in charge of the Prince Consolidated railroad, about one-half of the lineal feet of the grading of the main line and 65 per cent of the grading of the main line and 65 per cent of the grading of the yard tracks at the Prince mine has been completed, says the Pioche Record.

While it would seem from this that grading of the road is only about one-half done, the fact must be taken into consideration that the most difficult nart of the work is done and the engineer declares that the balance of the grading will be comparatively easy. Mr. Sadd figures that the balance of the grading with all of the grading within twenty or twenty-five more working days: that the rails should be laid and the road ready for operation not later than June 1.

Meanwhile, the bir 6000-ton ore bins at the Prince mine are in the course of construction, while the mine itself is being rapidly put into order for steady production.

COLUMBUS EX. HAS A FINE SHOWING

General Menager Frank B. Cook of the Johnshus Extension company, stated on Wednesday that the management had everything but a body of commercial inc. present conditions pointing to this sappy conclusion at almost any round of holes. There are five or six streaks of ore faithfully stoking to the face of the irift and apparently leading to somelining big and useful. A careful sampling of hese streaks gives a total valuation of \$40 per ton and the company figured on what would have been received from the smelters for the ore could it be shipped, and not on the full market value of the metals involved.

UTAH CAPITAL FOR NORTH SUCCESSFUL

Responding Splendidly to Development.

If the government of the United States appropriated \$5000 for the construction one mine to within reach of a railroad for the year ended December 31, 1911 (thine, the mine being owned by private (thine was in operation last quarter of interests, the howl that would be sent to the heights would exceed anything brought out by the proposed experiment plant installation throughout the western part of the United States by the gov-

ernment.

But the province of British Columbia has set aside \$5000 for the purpose of building a wagon road from the Rochet de Boule mine to the railroad tracks over the Skeena river, a mine being developed by Utah capital and talent, the general manager of which company. John F. Cowan, returned to his local headquarters yesterday. Last year the province expended \$8,000,000 on road building, and it finds it decidedly good business.

There were several new strong spots Wednesday in the local mining share market. Sliver King Coolition has been gradually drawing up to and away from the \$2 mark, below which it has hung for many months. Opening was a bit firmer and there has been's new demand for King William and Phitus. Union Chief holds its own well. May Day was weak yesterday, as were some of the unlisted stocks. The sales totaled 63,700 shares, the value of which was \$11,064.5.

The following were the closing unlisted and listed stock transactions:

General Manager D. C. Jackling says in regard to ore development: The total ore so developed is 54,980,645 tons, containing an average of 2.24 per cent copper. Of this quantity, it is estimated that something over 32,000,000 tons or nearly 60 per cent, can be mined by steam shovel. The average grade of ores that will be mined in this way is slightly less than the average grade of all ores developed, being 2.21 per cent copper. Calculations as to the percentage of ore that may be more economically mined by steam shovel than by underground methods are based on mining by this means to a depth of not exceeding 200 feet below the average surface. In certain portions of the ore deposits it will be desirable and practicable to extend stoam shovels or open pit mining to considerably greater dentity, and thorefore.

tain portions of the ore deposits it will be desirable and practicable to extend steam shovels or open pit mining to considerably greater depths, and therefore the percentage of ores that will actually be mined in this way will be considerably greater than stated.

Further developments will unquestionably result in the disclosure of large additional tonnages, particularly in a southwesterly extension on the south side of Santa Rita creek, where sufficient drilling was done before development operations ceased to indicate extensive ore bodies of good commercial grade. These bodies will not, however, connect directly with the main ore body now developed, and will probably be mined by underground methods; and, consequently, the plans for mining them and methods of developing for that purpose will not be affected in any way by the extraction of the ore bodies on which we are now working; and as we have already proven a quantity of ore sufficient to supply to its full capacity the mill we are now completing for approximately thirty years, it was not deemed necessary at this time to continue the development of further reserves.

General Manager D. C. Jackling says in regard to ore development. In my interim report of April 1, 1911, I stated that churn drilling for development purposes was entirely discontinued in the month of November, 1910. Since that time no drilling has been done, except where necessary to gain information of value in underground development near the edges of those portions of the ore deposit which are now being worked. Such drilling has resulted in some unimportant changes in tonnages from that stated in my report of April 1, 1911. As the drilling development now stands, the total tonnage calculated is 77,314,470 tons, averaging 2.17 per cent copper. Of this quantity, 64,760,000 tons, having an average grade of 2.23 per cent copper. "As has been explained in previous reports the ore classed as fully developed and having an average grade of 2.23 per cent copper. "As has been explained in previous reports the ore classed as fully developed is in deposits that have been drilled regularly and completely in 200-foot squares, and the partially developed exists in areas

copper.

"As has been explained in previous recopper.

"As has been explained in previous reports, the ore classed as fully developed
is in deposits that have been drilled regularly and completely in 200-foot squares,
and the partially developed exists in areas
that in places have not been drilled at intervals of greater frequency than 400
feet. The total area containing these developments is 183.4 acres."

UTAH GOLD FIELD STIRS COLORADO UP

Colorade papers are running considerable news about a new gold field in Utah. In what is termed "one of the wildest spois in the United States, and adjacent to one of the worst outlaw rendezvous in the world," which is going rather rapidly, and then some. Nuggets as hig as murbles, with a few hens egg sizes thrown in for good measure, are being found, so the specials have it. The spot from which these things come is on the Colorado river, north of Navajo mountain and at the foot of the Linear plateau. Bld. |Anked.
